

Virukill is the most advanced disinfectant in the world today...here are a few reasons why.

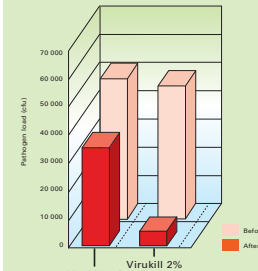

Numerous independent tests were conducted on **Virukill** by internationally respected institutes and researchers. These include: The South African Bureau of Standards (SABS), The department of Tropical Diseases at the University of Pretoria, The Department of Poultry Diseases at the University of Pretoria (Onderstepoort) and the Irene Agricultural Research Council (ARC). These tests confirmed our amazing results...read on and see for yourself.

The Virukill program is divided into 4 broad categories of applications

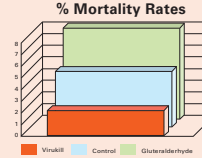

- 1 Washing
- 2 Disinfection
- 3 Spraying or fogging
- 4 Water dosing

THROAT pathogen count Before and After

✓ **Virukill** that was regularly fogged onto chickens (3 times a week), dramatically reduced mortality rates in both broilers and layers.

✓ **Virukill** that was regularly fogged onto broiler chickens, consistently improved the feed conversion ratio.

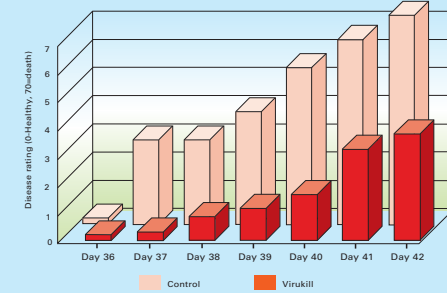

✓ **Virukill** that was regularly fogged onto layers, positively influenced their egg production.

✓ **Virukill** that was regularly fogged onto chickens, reduced bacterial counts inside the throat of the animal by as much as 70%!!!

✓ The full **Virukill** treatment was able to dramatically slow down the spread of a virulent disease epidemic even though the disease was already established in the flock!!

Influence of Virukill over a Virulent Newcastle Epidemic

67% of the Virukill group survived!!

✓ Eggs treated in a hatchery with the full **Virukill** program showed a 99% reduction in overall pathogen counts.

Virukill represents a breakthrough in animal disease control and is affordable, effective and practical. For more information on this unique product, contact your nearest Virukill distributor, or visit our website: www.icaonline.co.za
